

Energy Conservation

The electricity generation and associated air emissions were avoided through Atlantic City Electric investments in conservation measures. Energy conservation measures means less electricity needs to be generated and pollution is avoided.

Avoided generation	Avoided Air Emissions
0 KWh	0 tons CO ₂
	0 tons NO _x
	0 tons SO ₂

You may call Atlantic City Electric for additional information at (800) 642-3780.

Environmental Information for the Electricity Product

Electricity supplied from January 1, 2008 through December 31, 2008.

Basic Generation Service from Atlantic City Electric

Electricity can be generated in a number of ways with different impacts on the environment. The standardized environmental information shown below allows you to compare this electricity product with electricity products offered by other electric suppliers.

Energy Source

Atlantic City Electric relied on these energy resources to provide the electricity product.

Coal	47.0%
Gas	8.8%
Hydroelectric (large)	0.4%
Nuclear	37.4%
Oil	0.3%
Renewable energy	
Captured methane gas	2.1%
Fuel cells	0%
Geothermal	0%
Hydroelectric (small)	0.3%
Solar	0.1%
Solid waste	3.0%
Wind	0.4%
Wood or other biomass	0.2%

Renewable energy sources subtotal 6.1%

TOTAL 100%

Air Emissions

The amount of air pollution associated with the generation of the electricity product is shown. This amount is compared to a New Jersey benchmark. The benchmark approximates the average emission rate for all electricity generation in New Jersey.

CO₂ is a “greenhouse gas” which may contribute to global climate change. SO₂ and NO_x react to form acids found in acid rain. NO_x also reacts to form ground level ozone, an unhealthful component of “smog.”
